- What Is The Value Of X,Y,Z And W

```
Int  X=3;
Int  Y=2;
Int  Z=X++;  // 3
Int  W=++Y;  //3
```

- X = 4
- Y = 3
- Z = 3
- W = 3

- At the start the value of x = 3 then z value will be 3 because x is 3 and x++ is postfix and then x = 4 & z = 3

- At the start the value of y = 2 then w value will be 3 because y is 2 and ++y is postfix and then y = 3 & w = 3
